## Compact size, big functionality

### Vegetable slicer, cutter-emulsifier or combi

Composed of 3 products (vegetable slicer, cutter-emulsifier or combi) covering a wide range of functions, each product is available in 2 product lines: ACTIVE and ULTRA.

### ACTIVE or ULTRA lines

ACTIVE line, one-speed vegetable prep/food processor machines have powerful asynchronous ventilated motors and are equipped with an extremely intuitive control panel. ULTRA line is equipped with adjustable speed, “brushless” technology high efficiency motor and advanced control panel that offers all the information at-a-glance.

### “Brushless” technology: maximum efficiency (ULTRA)

“Brushless” technology, present in ULTRA line models, guarantees maximum efficiency as the motor maintains the torque throughout the speed range. In addition to this, they make less noise, weigh less and, as they do not require ventilation, they improve the watertightness of the machines.

### Sturdy and lightweight

Made from maximum quality reinforced materials, Compact vegetable slicers and cutters are sturdy and, at the same time, manageable and lightweight.

### Designed to make the most of your workspace

An opening in the motor block allows, in addition to protecting the plug, to make the most of the user's workspace. Therefore, thanks to the machine design, the plug does not require more space and the machine can work even positioned up against a wall.

### Dishwasher-safe components

All components in contact with food can be disassembled for cleaning and are dishwasher-safe, guaranteeing maximum hygiene.

# Vegetable slicers

## High production in compact design

Depending on the product, cut and speed, compact line vegetable slicers can obtain a production from 50 to 350 Kg/h.

## Interchangeable discs and grids

The range of discs and grids available enables more than 35 different types of cuts.

## Déli-Cut: universal and versatile

The exclusive 4 x 4 x 8 mm brunoise-type cut is unique for cooking, sautéing, seasoning, preparing fillings, and much more.

## Ejection slide and ejection disc

The ejection slide allows the cut product to be ejected by gravity, avoiding impacts. This feature is particularly useful for cutting slices and reconstructing the product for subsequent preservation or presentation.

In addition to this, the veg prep machine is equipped with an ejector disc for use with products that require this function.

## Lateral and directionable product output

As the product exits on one side, the cutters require less space on the work surface and resulting in optimal work flow in the preparation area. The product output opening is designed to direct the product, preventing splashing in the work area.

The design of the veg prep machine allows the product output to be positioned to the right or to the left depending on the user's needs at any given moment.

## Ergonomic design

The cutting function performs the cutting operation in a single movement, achieving maximum production without user fatigue.

## Exclusive "Force Control System" (ULTRA)

Thanks to the audible warning when the machine exceeds the established force, the user can achieve repeatable perfect results in each cycle.

## Upgrade into combi at any moment

Upgrade your vegetable slicer into a combi machine adding the cutter bowl and blades.

The vegetable slicer is also available in combi version.

# Cutter-emulsifiers

## Large capacity

The compact food processors are available with a 4.4 litre capacity bowl equipped with a high pipe and can grind, mix, knead... 2.5 kg of product, in seconds.

## Interchangeable blades

The cutter bowl is delivered as standard with a rotor with toothed blades. It can optionally be fitted with smooth and perforated blades.

## Built-in lateral stirrers

The lateral stirrers prevent the product from accumulating on the walls of the bowl, pushing it towards the blade without the need for operator intervention. This allows for faster and more homogeneous working and prevents the product from overheating.

## “Invert-blade” technology

Both the blades and the stirrers have been carefully designed to achieve superior blending quality. Thanks to the inverted blade and the lateral stirrers, a smooth, homogeneous and uniform blending is achieved.

## Lid equipped with gasket and inlet feed

The gasket on the transparent lid of the food processor bowl prevents the products from overflowing.

The cutter bowl's cover has an opening through which ingredients can be added during the cycle.

## Advanced timer and built-in programmes (ULTRA)

The panel, equipped with an advanced timer, includes 3 built-in programmes for specific functions: coarse blending, fine blending, pulses.

## Programme customization (ULTRA)

The machine has three special programmes: dense texture, fine texture and PrecisePulse (pulses, ideal for chunky texture). The user can create up to 9 customized programmes to obtain consistent, repeatable perfect results with an autonomous operation.

## Upgrade into combi at any moment

Upgrade your cutter-emulsifier into a combi machine adding the vegetable slicer attachment and the correspondent discs and grids.

The cutter / emulsifier is also available in combi version.

## Hub with toothed blades

The toothed blades are **ideal for cutting parsley and products with a high water content** that can be damaged using smooth blades. It is also good for **frozen products, nuts, cured ham, cooked meat, purees** (the puree is finer with this type of blade).

## Hub with smooth blades

The flat blades are **indicated for cutting raw meat**, because the edge and its shape can easily cut the nerve strands and difficult points of the meat. They are also recommended for **vegetables in general**, including onion, as it chops very well with only a small quantity of liquid from the product.

## Hub with perforated blades

Use the perforated blades to **make sauces and mix products such as mayonnaise, seafood cocktail sauce, aioli garlic mayonnaise**, etc. as well as for certain types of **pastry dough**.
